

Window Weatherization & Repair Workshop

A One Day Event Hands-On Event

Window Weatherization & Repair Workshop is a learn-by-doing workshop with a limit of 12 students. Bob Yapp, author, teacher and nationally known old house expert will be the instructor. Window Weatherization & Repair Workshop is an intense & fun hands-on opportunity. Students will learn safe glass removal, glazing putty application, weather-stripping & sash re-installation which includes re-ropeing the sash weights. Participants will how to completely weatherize and repair a double-hung, wood window unit.

In one day the 12 students can weatherize and repair 3 double hung window units from beginning to end. This creates a real opportunity for both learning and helping save original windows in a historic property. The weather stripping creates a track with a metal rib and all rails will get a rubber bulb type weather seal. Most windows will be one finger operation when completed and stop virtually all air infiltration. This is the number one method a majority of window restoration experts use all over the country and recently tested above the 2012 International Energy Code for air infiltration. **Registration is first come first serve and is expected to fill up quickly due to the heavily discounted price offered through this conference.**
